Backgrounds

Page background

The background colour can be set by CSS styles on the <body> tag. This will set the background for the whole page.

Background Gradients

Background can be set as a linear or radial gradient between two colours. The background has been set on this <div> element to a linear gradient.

The four numbers are coordinates in the form (x1, y1, x2, y2) which defines the gradient vector. x and y are values from 0 to 1, where 1 represents the height or width of the box as it is printed.

Background gradients can be set on all block elements e.g. P, DIV, H1-H6, as well as on BODY.

```
.gradient {  
  padding: 1em;  
  border:0.1mm solid #220044;  
  background-color: #f0f2ff;  
  background-gradient: linear #c7cdde #f0f2ff 0 1 0 0.5;  
}
```

The CSS properties background-image, background-position, and background-repeat are supported as defined in CSS2, as well as the shorthand form "background".

Borders

Rounded Borders

Rounded corners to borders can be added using border-radius as defined in the draft spec. of [CSS3](#).

The two length values of the border-*-radius properties define the radii of a quarter ellipse that defines the shape of the corner of the outer border edge. The first value is the horizontal radius.

border-top-left-radius: 55pt 25pt; 55pt is radius of curve from top end of left border starting to go round to the top.

If the second length is omitted it is equal to the first (and the corner is thus a quarter circle). If either length is zero, the corner is square, not rounded.

The border-radius shorthand sets all four border-*-radius properties. If values are given before and after a slash, then the values before the slash set the horizontal radius and the values after the slash set the vertical radius. If there is no slash, then the values set both radii equally. The four values for each radii are given in the order top-left, top-right, bottom-right, bottom-left. If bottom-left is omitted it is the same as top-right. If bottom-right is omitted it is the same as top-left. If top-right is omitted it is the same as top-left.

```
.rounded {  
  border:0.1mm solid #220044;  
  background-color: #f0f2ff;  
  background-gradient: linear #c7cdde #f0f2ff 0 1 0 0.5;  
  border-radius: 2mm;  
  background-clip: border-box;  
  padding: 1em;  
}
```

Tables

Table Styles

The property 'topntail' defined by a border-type definition e.g. "1px solid #880000" puts a border at the top and bottom of the table, and also below a header row (thead) if defined. Note that <thead> will automatically turn on the header-repeat i.e. reproduce the header row at the top of each page.

Col/Row Header	Second column header p	Third column header
Row 1	This is data	This is data
Row 2	This is long long long long data	This is data

  margin-top: 2pt; margin-bottom: 5pt; width: 70%;
  topntail: 0.02cm solid #495b4a; }
.theadClass { font-weight: bold; vertical-align: bottom; }
.tdClass { padding-left: 4mm; vertical-align: top; text-align:left;

Floating & Fixed Position elements

CSS "Float"

Block elements can be positioned alongside each other using the CSS property float: left or right. The clear property can also be used, set as left|right|both. Float is only supported on block elements (i.e. not SPAN etc.) and is not fully compliant with the CSS specification. Float only works properly if a width is set for the float, otherwise the width is set to the maximum available (full width, or less if floats already set).

This is text in a <div> element that is set to float:left and width:54%.

This is text in a <div> element that is set to float:right and width:28%. It also has an image with float:right inside. With this exception, you cannot nest elements with the float property set inside one another.

This is text that follows a <div> element that is set to clear:both.

```
<div class="gradient" style="float: right; width: 28%; margin-bottom: 0pt; ">
This is text in a &lt;div&gt; element that

CSS "Position"

At the bottom of the page are two DIV elements with position:fixed and position:absolute set

```
